The following test is designed to judge:

1) Your ability to read and understand from the specs.

2) Your ability to deliver on the functionality including the exhaustiveness of your testing.

3) Your technical capability and efficiency. The task should take anywhere between 1 - 3 hours for you to complete and hand it over to us for review.

……

Business Listing & Rating System

Objective

The objective of this machine test is to evaluate the candidate's skills in:

- Core PHP (CRUD operations)
- MySQL database design
- jQuery & AJAX
- Bootstrap Modals
- Third-party plugin integration (Raty)
- Clean coding practices
- Real-time UI updates without page refresh

Technical Requirements

Mandatory Stack

- PHP (Core PHP, no framework)
- MySQL
- jQuery
- AJAX
- Bootstrap 4/5
- Raty jQuery Plugin

Plugin (Mandatory)

Use **Raty jQuery Plugin** for ratings:
https://www.jqueryscript.net/demo/Full-featured-Star-Rating-Plugin-For-jQuery-Raty/

Functional Requirements

1. Business Listing Page

Create a page that displays a **Business Listing in table format**.

Columns

- ID
- Business Name
- Address
- Phone
- Email
- Actions (Add / Edit / Delete)
- Average Rating (Raty)

---

2. Business CRUD Operations

Requirements

Candidates must implement:

➜ Add Business

- Use Bootstrap Modal
- Submit via AJAX
- Save in database
- Table should update dynamically
- Page must NOT refresh

➜ Update Business

- Use Bootstrap Modal
- Pre-fill existing data
- Submit via AJAX
- Update table dynamically
- No refresh

➜ Delete Business

- Confirmation dialog
- Delete using AJAX
- Remove row dynamically
- No refresh

---

3. Rating System (Raty Plugin)

Display

- Last column shows **Average Rating**
- Use Raty plugin (read-only mode)

On Click

Clicking rating should:

- Open Rating Modal

- Allow user to submit rating

---

4. Rating Modal

Fields Required

- Name
- Email
- Phone
- Rating (Raty plugin)

Rating Features

- Half star support (.5 rating allowed)
- Rating scale: 0–5

---

5. Rating Logic

Save Logic

When submitting rating:

Rule 1

If **Email OR Phone already exists** for that business:
→ Update/overwrite existing rating

Rule 2

If new user:
→ Insert new rating

---

6. Real-Time Update (Important)

After rating submission:

- Recalculate average rating
- Update table immediately
- No page refresh allowed

Database Structure (Suggested)

businesses

- id (PK)
- name
- address
- phone
- email
- created_at

ratings

- id (PK)
- business_id (FK)
- name
- email
- phone
- rating
- created_at

Submission Requirements

Candidate must submit:

- Source code
- Database SQL file
- Setup instructions (README)
- Screenshots (optional)
- Zip file or GitHub repo
